**The Persistent Effect of Being Old for Grade on Social-Emotional Skills** (*Job Market Paper*)

*Abstract:* I examine the persistence of old-for-grade effects in secondary education on social-emotional skills, measured by self-esteem, friendships, learning approaches, and goal-setting mindsets. Students who are older at school entry, thereby older than their grade peers throughout school life may have a potential advantage in their social-emotional skill development. Utilizing a fuzzy regression discontinuity design and leveraging data from the Seoul Education Longitudinal Study 2010 (SELS) in South Korea, I uncover different patterns for girls and boys. I find that old-for-grade girls consistently exhibit higher self-esteem compared to young-for-grade girls during both middle and high school. I also find suggestive evidence that old-for-grade girls maintain more effective learning approaches and stronger friendships. In contrast, I do not find significant differences between old-for-grade and young-for-grade boys. These findings suggest the persistence of old-for-grade effects and gender disparities in social-emotional skill development, potentially carrying implications for future labor market outcomes.
