WORKING PAPERS

The Persistent Effect of Being Old for Grade on Social-Emotional Skills (*Job Market Paper*)

Abstract: I examine the persistence of old-for-grade effects on social-emotional skills during secondary education, measured by self-esteem, friendships, learning approaches, and goal-setting mindsets. Students who are older at school entry often exhibit better skills than their younger peers at that time, but how these gaps evolve through secondary education remains less understood. Exploiting a fuzzy regression discontinuity design and the unique context of Seoul Education Longitudinal Study 2010 (SELS), I uncover different patterns in how these effects persist for girls and boys. Old-for-grade girls consistently show higher self-esteem compared to their younger counterparts throughout middle and high school. There is also suggestive evidence that these girls maintain more effective learning approaches and closer friendships. In contrast, boys do not experience significant effects from being old for grade. Furthermore, I investigate whether the effects are driven by age at the time of the survey. The results indicate that relative age compared to grade peers is more likely the primary factor influencing these outcomes.
